After investigating further all of the VOCs are below the MCLs with the reported quantitation limits and for PAHs the Method Detection Limits are comparable to Method 525. If we need to provide further information to this issue please let us know.

Rich,

Here is a version for your consideration.

Cindy

I know we agreed on noon for your comments, but if you could manage 11am instead it would appreciated.

Also, one of things Dennis really wants to keep it very non- technical...
